Profile

Developer with 6+ years of experience in frontend and modern web architecture, with a profile that has recently shifted toward applied Artificial Intelligence. On those same solid technical foundations, I now build AI tools for a media group: I design the solutions, integrate them with internal systems, and take them to production.

My work goes well beyond experimentation. I design architectures, integrate models with internal systems, deploy to production servers, and document every decision. I understand both the code and the business context, and that combination is what turns an AI idea into a system the team relies on.

PROFESSIONAL EXPERIENCE

Grupo El Colombiano / AI Technical Lead

JANUARY 2026 – AUGUST 2026

I design, build, and deploy AI systems in production —RAG, classification, pipelines, and automation— integrating them with the company's internal tools and systems. I define the technical strategy for AI adoption and establish the framework for its safe use, including data-risk classification. I also drive adoption across teams through internal training and act as the reference technical authority on AI within the organization.

Grupo El Colombiano / Web Developer

SEP 2021 – DEC 2025

Beyond frontend and backend development, I led internal automation processes using Power Automate and custom scripts to optimize operational workflows, report generation, and data synchronization across platforms.

I worked with modern architectures integrating WordPress as a headless CMS with technologies such as React, Next.js, and Astro. Implemented integrations with external APIs and explored generative AI services for editorial automation and process improvement.

Freelance / Consultant & Developer

2021 – PRESENT

Development of e-commerce solutions and web applications using Next.js, React, Astro, and WordPress. Implementation of enterprise automations with Power Automate and n8n, including API integration, data processing, and system synchronization.

Dockerization of environments for controlled deployment and environment standardization. Integration of generative AI services for assistants, automated content generation, and intelligent data processing.

Grupo El Colombiano / Functional Analyst

JUL 2021 – SEP 2021

Responsible for gathering business requirements and defining IT solutions. Also accountable for development oversight, testing, implementation, and user training of the delivered systems.

Grupo El Colombiano / University Intern

JAN 2021 – JUL 2021

In charge of SEO and performance optimization for company websites. Also responsible for receiving and implementing functional requirements based on specific site needs (most of the websites were built on WordPress).

Emtelco CX&BPO / Technical Support

SEP 2018 – AUG 2019

Provided technical assistance and solutions to users facing issues with products, services, and systems associated with the TIGO brand. Worked as a trained technology support professional.

EDUCATION

Instituto Tecnológico Metropolitano

Information Systems Technologist
2017 - 2021

SENA

Multimedia Development and Integration
2014 - 2015

Expertise In

Artificial Intelligence

Wordpress (also Headless)Astro

ReactJavaScriptAutomate

HTMLCSS

Strong Knowledge Of

Generative AI (Claude / OpenAI)RAG
